

RAISING THE STEEL WELL TANK BAR SINCE 1988.

WELL-RITE WITH CAD-2, FLEXCON'S PREMIUM STEEL WELL TANK

©2007 Flexcon Industries

16 gauge solid steel tank, finished with highest quality urethane paint.

Water chamber is independent of tank walls, allowing diaphragms to be sized properly for each tank.

Steel clench ring regulates movement and prevents diaphragm from rubbing against tank wall.

Condensation reducing design virtually eliminates external corrosion.

Patented, welded, all stainless steel water connection has separate air and water seals.

Designed for premium water system installations, the improved Flexcon WELL-RITE continues to set the Standard for steel well tanks. It's the only well water tank in this category that combines CAD-2 technology (Flexcon's famous controlled action diaphragm system) with a stainless steel water connection. The result is superior air and water separation and unmatched performance.

CONTROLLED ACTION DIAPHRAGM MAXIMIZES DRAWDOWN & ELIMINATES ABRASION

Our patented manufacturing technique allows Flexcon to properly size the diaphragm in a full range of sizes from 14 to 119 gallons. Every tank undergoes a seam-weld test, high pressure test, and is subjected to our famous helium test. Before leaving the factory, a final air charge check insures each tank arrives at the job site with the correct precharge.

Flexcon stands behind every WELL-RITE tank with a five-year warranty. Just what you would expect from Flexcon: quality and performance guaranteed.
